Safety information!

**Important information!**

- **WARNING** Keep this manual complete and accessible to personnel at all times!
- **WARNING** Read this manual carefully before installing or operating the equipment. Observe the instructions contained in this manual.
- **WARNING** Do not modify the equipment without authorization.

**NOTICE**

This manual is an integral part of the equipment described therein. It describes the safe and proper use of the vacuum pump. Make operating personnel aware of dangers arising from the pump and the pumped substances. VACUUBRAND disclaims any liability for inappropriate use of these pumps and for damage from failure to follow instructions contained in this manual.

This manual is only to be used and distributed in its complete and original form. It is strictly the users’ responsibility to check carefully the applicability of the guidance in this manual with respect to his product.

Manual-no.: 20901272

The following signal word panels and safety symbols are used throughout this manual:

This is the safety alert symbol. It is used to alert you to potential personal injury hazards. Obey all safety messages that follow this symbol to avoid possible injury and death.
DANGER ➤ DANGER indicates a hazardous situation which, if not avoided, will result in death or serious injury.

WARNING ☢️ WARNING indicates a hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION • CAUTION indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE NOTICE is used to address practices not related to personal injury.

Formatting used in this manual:
Note: The signal word panels in all sections of this manual always refer to all paragraphs of the same format (➤ / ☢️ / • / plain text) following each signal word panel.

The document "Safety information for vacuum equipment" is part of this manual! Read the "Safety information for vacuum equipment" and observe the instructions contained therein!
General information

**WARNING**

Read and comply with this manual before installing or operating the equipment.

Before operating the equipment read and comply with the section "Cleaning and decontamination"!

**NOTICE**

Remove all packing material, remove the product from its packing-box, remove the protective covers from the inlet and outlet ports and keep, inspect the equipment. If the equipment is damaged, notify the supplier and the carrier in writing within three days; state the item number of the product together with the order number and the supplier’s invoice number. Retain all packing material for inspection.

**Do not use the equipment if it is damaged.**

Intended use

**WARNING**

The system and all system parts are not to be used on humans or animals.

Prevent any part of the human body from coming in contact with the vacuum.

Comply with notes on correct vacuum and electrical connections, see section "Use and operation”.

The systems are designed for ambient temperatures during operation between +10°C and +40°C. Check the maximum temperatures.

**NOTICE**

Ensure that the equipment and all components are suitable for the **intended application**. Use the system only for aspiration of liquids and for filtration.
Setting up and installing the system

**CAUTION**

- Comply with **maximum permissible pressures** and pressure differences; see section "Technical data". Do not operate the pumping unit with overpressure at the inlet or outlet.

**NOTICE**

Provide a firm level platform for the equipment. Ensure a stable position of the equipment. Ensure that hose connections are mechanically stable.

Connect the BVC basic and BVC basic G to a suitable vacuum supply (vacuum pump, local vacuum network VACUULAN®).

The diameter of the outlet tubing should be at least as large as the diameter of the pump connections. Comply with all **applicable and relevant safety requirements** (regulations and guidelines), **implement the required actions and adopt suitable safety measures**.

**Ambient conditions**

**WARNING**

Pay attention to the **permissible maximum ambient temperatures** (see "Technical data").

**NOTICE**

To the best of our knowledge the equipment is in compliance with the requirements of the applicable EC-directives and harmonized standards (see "Declaration of conformity") with regard to design, type and model, especially directive DIN EN 61010-1. This directive gives, in detail, conditions, under which the equipment can be operated safely (see also IP degree of protection).
Operation conditions

- The devices have no approval for operation in or for pumping of potentially explosive atmospheres.

- The devices are not suitable to pump:
  - unstable substances and substances which react explosively under impact (mechanical stress) and/or when being exposed to elevated temperatures without air,
  - self inflammable substances,
  - substances which are inflammable without air and
  - explosive substance

- The devices have no approval for operation below ground.

Danger

- The devices are not suitable for suction of dust.

Warning

- Take into consideration interactions and chemical reactions of used media.
  Ensure that the materials of the wetted parts are compatible with the pumped substances, see section ”Technical data”.

Safety during operation

- Avoid interactions of the media in the collection bottle absolutely.
  Comply with material safety data sheets and notes on safe use of the manufacturer.
  Do not mix incompatible disinfectants and/or incompatible reagents / solvents as well as unknown substances.
For example sodium hypochlorite (chlorine bleach)

<table>
<thead>
<tr>
<th>Incompatible chemicals and agents</th>
<th>Possible results of mixing with sodium hypochlorite (chlorine bleach)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Acids or acidic compounds (e. g. hydrochloric acid, aluminium chloride)</td>
<td>Release of chlorine gas</td>
</tr>
<tr>
<td>Ammonia containing compounds (e. g. ammonium hydroxide, quarternary ammonium salts)</td>
<td>Formation of explosive compounds, release of chlorine gas and other hazardous gases</td>
</tr>
<tr>
<td>Organic chemicals (e. g. solvents, polymers, amines, oils)</td>
<td>Formation of chlorinated organics, release of chlorine gas and other hazardous gases</td>
</tr>
<tr>
<td>Metals (e. g. copper, iron) Hydrogen peroxide</td>
<td>Release of oxygen, overpressure, rupture of a closed system</td>
</tr>
<tr>
<td>Reducing agents (e. g. sodium thiosulfate)</td>
<td>Production of heat, boiling</td>
</tr>
<tr>
<td>Guanidine salts (e. g. guanidine hydrochloride, guanidine thiocyanate)</td>
<td>Release of toxic gases, e. g. chlorine, chloramine, hydrogen cyanide</td>
</tr>
</tbody>
</table>

- Avoid the formation of dangerous reactions / gases in the BVC, especially in the collection bottle. If this is impossible dispose of dangerous gases at the outlet of the pump appropriately.

- Adopt suitable measures to prevent the release of dangerous, toxic, explosive, corrosive, noxious or polluting fluids, vapors and gases. In such cases, install an appropriate collecting and disposal system and take protective action for pump and environment.

- If the equipment is used in combination with hazardous materials (e. g., in medical-microbiological laboratories) check all relevant safety and health requirements and determine the applicability of regulatory limitations prior to use if necessary.
Use appropriate safety work materials and methods if necessary, e.g., steam sterilization, sterilization indicators or germicides. For notes concerning the sterilization of wetted parts, see the “Technical Data” section and “Cleaning and decontaminating”. It is the user’s responsibility to ensure effective sterilization.

**WARNING**

Check the collecting bottle regularly for cracks. Do never use a collecting bottle with cracks nor expose it to vacuum.

Comply with applicable regulations when disposing of chemicals. Take into consideration that chemicals may be polluted. Take adequate precautions to protect people from the effects of dangerous substances (chemicals, thermal decomposition products of fluoroelastomers), wear appropriate safety-clothing and safety glasses.

Use only **OEM spare parts and accessories**; otherwise safety and performance of the equipment as well as the electromagnetic compatibility of the equipment might be reduced. The CE mark or the cTUVus mark (see rating plate) may become void if original equipment manufacturer parts are not used.

In case of leaks in the manifold, aspirated substances might be released into the environment. Comply especially with notes on operation and use and maintenance.

Due to the residual **leak rate of the equipment**, there may be an exchange of gas, albeit extremely slight, between the environment and the vacuum system. Adopt suitable measures to prevent contamination of the pumped substances or the environment.
• Use the system only in combination with the integrated hydrophobic filter (sterilizable) to protect equipment and environment (people).

**NOTICE**

Maximum liquid level in collecting bottle: approx. 80%, depending on the application. (When working with low-boiling liquids, or liquids that tend to foam, the maximum liquid level might be reduced).

---

**Maintenance and repair**

➤ Attention: The equipment might be contaminated with noxious or otherwise dangerous process chemicals that have been pumped during operation. Ensure that the equipment is decontaminated before maintenance.

_WARNING_ Take adequate precautions to protect people from the effects of dangerous substances if contamination has occurred. Wear appropriate safety-clothing when you come in contact with contaminated components.

❖ Never operate a defective or damaged device.

**NOTICE**

In order to comply with law (occupational, health and safety regulations, safety at work law and regulations for environmental protection) vacuum pumps, components and measuring instruments returned to the manufacturer can be repaired only when certain procedures (see section "Repair - Maintenance - Return - Calibration") are followed.

### BVC basic

![BVC basic diagram](image)
Use and operation

First steps: Installation

Unpack the equipment.

Read and comply with the document "Safety information for vacuum equipment - Sicherheitshinweise für Vakuumgeräte"!

Assemble tubing with filter.

Setting up the BVC.

Assemble connection to the vacuum supply via rubber tubing or PTFE tubing.

Install an appropriate separator between BVC and vacuum supply if necessary.

Attach tubing of the VacuuHandControl VHC\textsuperscript{pro} to the hose nozzle of the bottle head.
**During operation**

**WARNING**

Max. ambient temperature: 40 °C

**CAUTION**

- Use the system only with the integrated hydrophobic filter to protect the vacuum supply from aspirated liquids and aerosols, and to protect the environment/user from contamination risk.

The mechanical vacuum control provides the vacuum in the bottle in a range of 150 mbar (minimum switching off pressure) to 500 mbar (maximum switching on pressure) for aspiration. At the end of the operation, aspirate all liquids out of the aspiration tubing and rinse with a cleaning agent or disinfectant if necessary.

An integrated non-return valve avoids backflow from the vacuum supply to the BVC basic / BVC basic G. This helps avoid contamination of the BVC with media that may be inside the vacuum supply.

When separating the device from the vacuum supply, the non-return valve avoids venting of the collecting bottle.

The aspiration system doesn’t feature an air admittance valve. If the collecting bottle is under vacuum, the existing underpressure inside the bottle remains until the vacuum is reduced (pressure rises) by further aspiration.
Attention: Removing the connection tubing from the screw cap, the filter or from the inlet of the vacuum controller leads to immediate venting of the collecting bottle!

**Filtration**

Connect the suction flask to the bottle head.
Filter and collecting bottle

**NOTICE**

The hydrophobic filter retains water and aqueous solutions also in the form of aerosols. When using solvents or due to evaporation of water, formation of condensate at the outlet of the BVC is possible.

**WARNING**

- **Important**: Comply with applicable regulations when disposing of solvents.
- **Attention**: Do not remove connections in case of liquid in the tube. Do not touch contaminated parts when removing the screw cap. Risk of infection! Wear appropriate protective clothing, e.g., gloves.

### Filter

Change filter if necessary in case of contamination, weak aspiration or no aspiration.

- Use only the original spare part (see section Accessories - spare parts and sterilize and dispose of the filter according to appropriate regulations.

**Note**: After disinfection with alcohol, allow the filter to dry completely because the filter may become clogged by alcohol.
Emptying the collecting bottle

Check liquid level in the collecting bottle regularly.

Maximally admissible liquid level in collecting bottle: approx. 80 %, depending on the application. (In case of low boiling liquids or in case of suction of liquids which tend to foam, the admissible liquid level might be reduced.)

Vent the system.

Remove the connecting tube from the filter, isolate connections in case.

Remove screw cap from the collecting bottle.

Remove bottle from the support.

Sterilize and dispose of collected liquid according to appropriate regulations.
Cleaning and decontaminating

**Autoclaving**

The collecting bottle with bottle head and screw cap, the quick coupling and the filter are designated for steam sterilization at 121°C and 2 bar absolute (1 bar overpressure). Time of exposure according to DIN 58946 $t_e = 20$ minutes.

**NOTICE**

Prior to autoclaving loosen or remove the bottle head from the bottle.

It is the user’s responsibility to ensure effective autoclaving.

**NOTICE**

**Autoclaving**

Maximum liquid level in collecting bottle: 80%. When working with low boiling liquids or liquids that tend to foam, the maximum liquid level may be less.

The number of autoclaving cycles can be marked on the plastic disc (Memory Disc) of the filter (max. 20 autoclaving cycles according to the manufacturer instruction).

**NOTICE**

UV disinfection is permitted but may lead to discoloration of the plastic parts.

Attention: UV disinfection acts only at the surface.
Over time, discoloration and material changes (e.g., resiliency, elasticity/tightness, cracking) due to repeated steam sterilizations may occur.

Important notes on use of disinfectants

Aggressive disinfectants which release chlorine or oxygen radicals, e.g., sodium hypochlorite (chlorine bleach) or peroxide compounds can corrode the material of the 4l polypropylene collecting bottle and other components (e.g., couplings). This may lead to stress cracks and breakage of the 4l polypropylene bottle.

Therefore, prolonged use of these disinfectants in the 4l polypropylene bottle is strongly discouraged. After brief disinfecting operations in the bottle, rinse bottle thoroughly to avoid leaving residues of disinfectant in the bottle.

Alternative: Use of the BVC basic G with 2l borosilicate glass bottle.

Attention: The quick-coupling accessory sets between the pumping unit and VHC are not suitable for use with sodium hypochlorite (chlorine bleach).

Using corrosive disinfectants may result in damage, malfunction and/or failure of the equipment.

Chlorine permeates the hydrophobic filter on top of the collecting bottle and may damage the materials of the equipment or the vacuum supply.

Leaking of liquid from a damaged collecting bottle or suction tube may lead to exposure of personnel and material or to damage/destruction of wetted equipment or laboratory furniture.
The use of the disinfectant Sekusept® Plus (Manufacturer: Ecolab GmbH & Co OHG, Düsseldorf, Germany) in extensive in-house testing did not cause any damage to the collecting bottle. Hence the disinfectant Sekusept® Plus - even when used in the collecting bottle during suction - is preferred to chlorine bleach. Comply with use and safety instructions of the manufacturer!

- Even if using disinfecting solutions after termination of the suction it is absolutely necessary to assure the compatibility of disinfectant and the parts to be disinfected.
- For information about the compatibility with the materials of the pumping unit, ask the manufacturer of the disinfectant.
- The wetted materials of the system are listed in the section ”Technical data”.
Assembling of components

Replacing the filter

Vent the system.

Ensure that there is no liquid in the tube to avoid risk of contamination.

Remove connecting tube from the filter. Remove the filter from the piece of tube at the hose nozzle.

Attach new filter.

Observe flow direction. Position filter with the printed side “IN” towards the bottle.

Attach the connecting tube.
Assembling a second VHC<sup>pro</sup> connection set (with / without coupling) or conversion to quick coupling VHC<sup>pro</sup> - bottle

Empty bottle.
Decontaminate equipment if necessary.

Remove filter with connection hose from bottle head.

Remove screw cap from the collecting bottle.

Unscrew closing screw.
Only BVC with polypropylene bottle: Remove counter nut inside the screw cap.

**BVC with glass bottle**

Screw hose connection (1a) with seal ring (2) or coupling (1b) with seal ring (2) into the screw cap.
Assemble hose (3) under the screw cap to the lead through.
BVC with polypropylene bottle

Insert hose connection (1a) with seal ring (2) or coupling (1b) with seal ring (2) in the screw cap. Assemble hose (4) under the screw cap to the lead through and secure lead through with counter nut (3).

Screw screw cap to bottle.

Assemble filter.

Assemble VHC pro.

Assembling quick coupling bottle - pump unit (extension set)

Attention: The extension set “Quick coupling bottle - pump unit” is designated for two different extension versions. Therefore the set consists of parts, which may not be necessary in the individual case. Redundant parts are not credited by VACUUBRAND.

Assembling to support connection

Remove hose.
Disassemble hose nozzle.
Hold counter piece with open-ended wrench size 19 mm.
Assemble coupling (2) with seals (1, 3) and hose nozzle (4). Hold counter piece with open-ended wrench size 19 mm. Connect hose.

Assembling to an additional bottle

Assemble coupling part (1) with seal (2) and hose nozzle (3). Connect tubing.

Quick coupling sets

Quick coupling set: VHC<sup>pro</sup> to bottle

Quick coupling made of PVDF, with adapter to connect a VHC<sup>pro</sup> to a collection bottle. When disconnected, the collection bottle closes vacuum tight.

Quick coupling set: Bottle to pump unit

Quick coupling made of PVDF, to connect a collection bottle to a BVC basic / basic G. When disconnected, the collection bottle closes vacuum tight.

NOTICE

Attention: The quick-coupling accessory sets between the pumping unit and VHC<sup>pro</sup> are not suitable for use with sodium hypochlorite (chlorine bleach).
Collection bottle 4L, made of PP, with protection filter and inlet tube ..........20635810

Collection bottle 2L glass, coated, with protection filter and inlet tube.........20635809

Every employer (user) is held responsible for the health and safety of his employees. This also applies to service personnel performing repair, maintenance, return or calibration.

The **health and safety clearance form** informs the contractor about any possible contamination of the device and forms the basis for the risk assessment.

**In case of devices which have been in contact with biological substances of risk level 2** contact the VACUUBRAND service absolutely before dispatching the device. These devices have to be completely disassembled and decontaminated by the user prior to shipment. Do not return devices which have been in contact with biological substances of risk level 3 or 4. These devices cannot be checked, maintained or repaired. Also decontaminated devices must not returned to VACUUBRAND due to a residual risk.

The same conditions apply to on-site work.

**No repair, maintenance, return or calibration is possible unless the correctly completed health and safety clearance form is returned. Devices sent are rejected if applicable.** Send a completed copy of the **health and safety clearance form** to us in advance. The declaration must arrive before the equipment. Enclose a second completed copy with the product.

Remove all components from the device that are no original VACUUBRAND components. VACUUBRAND will not be responsible for lost or damaged components that are no original components.

**Drain the device completely of fluids and residues.**

**Decontaminate the device.** Close all openings airtight especially if using substances hazardous to health.
To expedite repair and to reduce costs, please enclose a detailed description of the problem and the product’s operating conditions with every product returned. If you do not wish a repair on the basis of our quotation, the device may be returned to you disassembled and at your expense. In many cases, the components must be cleaned in the factory prior to repair. For cleaning we use an environmentally friendly water based process. Unfortunately the combined attack of elevated temperature, cleaning agent, ultrasonic treatment and mechanical stress (from pressurised water) may result in damage to the paint. Please mark in the health and safety clearance form if you wish a repaint at your expense just in case such a damage should occur. We will also replace parts for cosmetic reasons at your request and at your expense.

**Before returning the device**
Pack the device properly, if necessary, please order original packaging materials at your costs.
Mark the package completely **Enclose the completed health and safety clearance form.**
Notify the carrier of any possible contamination if required.

**Scrapping and waste disposal**
Dispose of the equipment and any components removed from it safely in accordance with all local and national safety and environmental requirements. Particular care must be taken with components and waste oil which have been contaminated with dangerous substances from your processes. Do not incinerate fluoroelastomer seals and O-rings. You may authorize us to dispose of the equipment **at your expense.** Otherwise we return the device at your expense.
Health and safety clearance form

1. Device (Model): ..................................................................................................................................................

2. Serial no.: ...........................................................................................................................................................

3. Reason for return / malfunction: ..........................................................................................................................

4. Has the device been used in a copper process step (e.g., semiconductor production): ☐ yes ☐ no

5. Substances (gases, liquids, solids, biological material, e.g. bacteria, viruses) in contact with the device / which have been pumped:

6. Risk level of the used biological material: ☐ none ☐ 1 ☐ 2* ☐ 3** ☐ 4**
   * Contact the VACUUBRAND service absolutely before dispatching the device.
   ** Devices which have been in contact with biological substances of risk level 3 or 4 cannot be checked, maintained or repaired. Also decontaminated devices must not returned to VACUUBRAND due to a residual risk.

7. Radioactive contamination: ☐ yes ☐ no

8. Prior to return to the factory the device has been decontaminated: ☐ yes ☐ no
   Description of the decontamination method and the test / verification procedure:

9. All parts of the device are free of hazardous, harmful substances: ☐ yes ☐ no

10. Protective measures required for service staff:

11. If the paint is damaged, we wish a repaint or a replacement of parts for reason of appearance (repaint and replacement at customer’s expense): ☐ yes ☐ no

12. Legally binding declaration
   We assure for the returned device that all substances, which have been in contact with the device are listed in section 5 and that the information is complete and that we have not withheld any information. We declare that all measures - where applicable - have been taken listed in section “Repair - Maintenance - Return - Calibration". By our signature below, we acknowledge that we accept liability for any damage caused by providing incomplete or incorrect information and that we shall indemnify VACUUBRAND from any claims as regards damages from third parties. We are aware that as expressed in § 823 BGB (Public Law Code of Germany) we are directly liable for injuries or damages suffered by third parties, particularly VACUUBRAND employees occupied with handling/repairing the product. Shipping of the device must take place according to regulations.

Name: ................................................................. Signature: .................................................................

DECLARATION OF CONFORMITY – China RoHS 2

VACUUBRAND GMBH + CO KG has made reasonable efforts to ensure that hazardous materials and substances may not be used in its products.

In order to determine the concentration of hazardous substances in all homogeneous materials of the subassemblies, a “Product Conformity Assessment” (PCA) procedure was performed. As defined in GB/T 26572 the “Maximum Concentration Value” limits (MCV) apply to these restricted substances:

- **Lead (Pb):** 0.1%
- **Mercury (Hg):** 0.1%
- **Cadmium (Cd):** 0.01%
- **Hexavalent chromium (Cr(+)VI):** 0.1%
- **Polybrominated biphenlys (PBB):** 0.1%
- **Polybrominated diphenyl ether (PBDE):** 0.1%

**Environmental Protection Use Period (EPUP)**

EPUP defines the period in years during which the hazardous substances contained in electrical and electronic products will not leak or mutate under normal operating conditions. During normal use by the user such electrical and electronic products will not result in serious environmental pollution, cause serious bodily injury or damage to the user’s assets.

The environmental Protection Use Period for VACUUBRAND products is 40 years.

此表格是按照SJ/T 11363-2006中规定所制定的。
This table is created according to SJ/T 11363-2006.

Note: Table applies to all products. Some of the components or parts listed above may not be part of the enclosed product.

O: Indicates that the above mentioned hazardous substance contained in all homogeneous materials of the part is below the required limit as defined in GB/T 26572.

X: Indicates that the above mentioned hazardous substance contained in at least one of the homogeneous materials of this part is above the required limit as defined in GB/T 26572.

Except for the information disclosed above, it must be stated that these subassemblies are not intentionally manufactured or formulated with lead (Pb), mercury (Hg), cadmium (Cd), hexavalent chromium (Cr+VI), polybrominated biphenyls (PBB), and polybrominated diphenyl ethers (PBDE).

Products manufactured by VACUUBRAND may enter into further devices (e.g., rotary evaporator) or can be used together with other appliances (e.g., usage as booster pumps).

With these products and appliances in particular, please note the EFUP labeled on these products. VACUUBRAND will not take responsibility for the EFUP of those products and appliances.
